

Firm Order FADEC Service Link for CD-135 & CD-155 and Centurion 1.7

Continental Diesel Engines are controlled by the electronic FADEC system which logs engine data for service and diagnostic reasons. This data is vital to service centers in order to find the cause of possible errors and has to be submitted. The FADEC Service Link uses the diagnostic port installed with every Continental Diesel Engine to download FADEC data. For some installations an independent power supply might be necessary. This can be provided by a separate adapter in connection with a standard DC socket that has to be present in the aircraft. Please refer to the attached list or consult your local service center whether it is required in your application. The included USB drive acts as a storage device during download and enables the user to transport the data to any location from where it can be sent.
